## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-23, drawn to an apparatus for securing a tool, classified in class 248, subclass 206.3.

Group II. Claims 24-27, drawn to a method for securing, classified in class 248, subclass 674.

Inventions Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case both justifications can be shown. First, the process for using the product as claimed can be practiced with another materially different product. The planar plate of claim 24 can be fixed to the surface in a way other than disclosed. Second, the product as claimed can be used in a materially different process of using the product. For example, the product could clearly support a number of other objects beside tools or the product could be hung and then an object supported thereby.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

If Applicant elects Group I above, Applicant is further required elect only one of the distinct species below.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Species I,    Figures 1-5            (groove tool holder)
- Species II,   Figures 6 and 7       (sleeve tool holder)
- Species III,   Figures 9 and 10      (flat plate support)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Jeffrey H. Kamenetsky on May 17, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
